

Weekly Safety Meeting

PPE Eye Protection

Instructor: _____ Date/Time: _____

OSHA Regulation

1910.133(a)(1)

The employer shall ensure that each affected employee uses appropriate eye or face protection when exposed to eye or face hazards from flying particles, molten metal, liquid chemicals, acids or caustic liquids, chemical gases or vapors, or potentially injurious light radiation.

Talking Points:

Employees should wear eye protection that could include goggles and or face shields when the SDS sheet dictates that eye protection is worn. In addition, when conditions are preset where debris could get into the eye safety glasses should be worn.

1910.133(a)(2)

The employer shall ensure that each affected employee uses eye protection that provides side protection when there is a hazard from flying objects. Detachable side protectors (e.g. clip-on or slide-on side shields) meeting the pertinent requirements of this section are acceptable.

Talking Points:

Side Protection should be used when needed. Talk about unique situations this could occur.

1910.133(a)(3)

The employer shall ensure that each affected employee who wears prescription lenses while engaged in operations that involve eye hazards wears eye protection that incorporates the prescription in its design, or wears eye protection that can be worn over the prescription lenses without disturbing the proper position of the prescription lenses or the protective lenses.

Talking Points:

Those requiring a prescription to see will be required to wear over the top eye wear or demonstrate that the lenses they are wearing are safety rated.

1910.133(a)(4)

Eye and face PPE shall be distinctly marked to facilitate identification of the manufacturer.

1910.133(b)(2)

Protective eye and face protection devices that the employer demonstrates are at least as effective as protective eye and face protection devices that are constructed in accordance with one of the above consensus standards will be deemed to be in compliance with the requirements of this section.

Talking Points:

All Safety glasses and eye protection wear has to have manufacturer marking clearly visible and the marking ANSI Z87.1. When these markings are no longer legible they need to be replaced.
