

Weekly Safety Meeting

Water Fed Pole Safety

Instructor: _____ Date/Time: _____

Water Fed Poles are a recognized method of cleaning glass and while they do eliminate fall hazards by keeping people off ladders however, they present a separate set of safety risks.

Electrical Hazards-

Remind employees that the material many WFP's are constructed of conduct electricity and have killed people.

Remind of Minimum Approach Distances and that they are established based on Voltage coming into building.

Use Insulated WFP's if available

Always utilize a GFI inline between pump and house-don't rely on homeowner GFI

Slips and Falls-

Remind employees that Water Fed System hoses can create fall hazards and that safety cones and barricades should be used

Fall Hazards-

Remind employees that the pole can fall in any direction and possibly strike people and or property. Set perimeter for protection.

Repetitive Motion-

Employees can strain backs and necks with repetitive motion while using water fed poles especially high in the air. Take frequent breaks and utilize all safety gear such as belay glasses and handles that allow for less stressing of the joints.
