MECHANIC JOB DESCRIPTION

By Brian Hegarty

MECHANIC JOB DESCRIPTION

A+ Powerwashing and Roof Cleaning has a position on our team that is perfect for someone who is retired or works shift work or is part time somewhere else.

The position requires a *highly motivated, friendly, honest person with integrity and morals beyond reproach.*

We have a large and growing fleet of vans, trailers and hot water power washers that need to be serviced in off hours so our fleet runs without break downs.

This position requires working early evenings, and 1 weekend day. *Usually 2-4 hours per evening and 6-9 hours on 1 weekend day.*

Most of the work is preventive maintenance but on a few occasions it is emergency work that must be done to get the unit back on the road the next day. *Most fixes take a couple of hours at most.*

Knowledge of 12 volt electrical is a must. Experience with small engines, power washer pumps and heaters, trailer maintenance, MIG welding and vehicle maintenances like brakes, starters, oil changes and other light work is helpful but we are willing to teach the right applicant.

If you have these skills or are capable of learning them please contact us at
